

Product XYZ — One-Pager

Positioning: Product XYZ is an agentic workflow layer that connects to your existing data stack and turns natural-language requests into secure actions (analytics, automations, and guided deployments).

Core Features

- Agentic orchestration for multi-step GTM workflows (research → plan → execute → measure).
- Retrieval-Augmented Generation (RAG) for product and policy knowledge.
- Text-to-SQL for quantitative questions over your GTM warehouse.
- Audit logs, role-based access control, and redaction for sensitive fields.

Differentiators

- Hybrid routing: automatically chooses RAG, SQL, or both based on intent and confidence.
- Safety-first execution: query sandboxing + allowlisted schemas + PII suppression.
- Evaluation harness: built-in test sets for factuality, SQL correctness, and citation quality.

Important note (legacy): Product XYZ supports **Cloud-only** deployments.

Updated note: As of v3.0, Product XYZ supports **Cloud, On-Prem, and Hybrid** deployment modes.

Deployment Guide (v3.0)

Choose a mode based on data residency, latency, and control requirements.

Deployment Modes

Mode	Best for	Notes
Cloud	Fastest time-to-value	Managed updates; requires outbound connectivity.
On-Prem	Strict residency / air-gapped	Customer manages upgrades; limited telemetry.
Hybrid	Mixed constraints	RAG layer on-prem + orchestration in cloud (or vice versa).

Security & Access

- Use a service account with least-privilege access to the analytics database.
- Allowlist schemas/tables for SQL generation; block write operations by default.
- Store embeddings in a separate vector index; never embed raw secrets.

Contradiction test: Older runbooks say to set **SQL_WRITE_ENABLED=true** during onboarding. The v3.0 guide explicitly says **SQL writes must remain disabled** in production environments.

Packaging & Pricing Cheat Sheet

Use these tiers for conversation practice only. They are synthetic.

Tier	Monthly price (USD)	Included	Limits
Starter	\$4,000	XYZ-CORE	Up to 50 seats; 1 workspace
Growth	\$12,000	XYZ-CORE + XYZ-ANALYTICS	Up to 250 seats; 3 workspaces
Enterprise	Custom	All modules incl. XYZ-AUTOMATION + XYZ-SECURITY	Up to 500 seats; SSO + audit export

Common SKUs

- **XYZ-CORE:** Orchestration + basic RAG
- **XYZ-ANALYTICS:** Metrics, dashboards, cohort analysis
- **XYZ-AUTOMATION:** Triggered workflows + connectors
- **XYZ-SECURITY:** Audit export, data masking, policy packs

Legacy pricing note: XYZ-ANALYTICS is included in Starter.

Updated pricing note: XYZ-ANALYTICS is **not** included in Starter; it starts in Growth.

FAQ

Q: Does Product XYZ require a data warehouse?

A: Not strictly, but SQL features require a relational source. RAG-only deployments can run without SQL.

Q: How do you prevent hallucinations?

A: We combine citations from the enablement pack with deterministic SQL execution and validation rules.

Q: Can it run in an air-gapped environment?

A: Yes in On-Prem mode; note that some telemetry features are disabled.

Q: What data is stored?

A: Configuration, prompts, and audit logs. Embeddings store derived vectors; avoid embedding secrets.

Q: Does it support writeback to CRM?

A: Legacy docs mention writeback. v3.0 recommends read-only operation unless a separate approval workflow exists.
